The cleanest pump you will ever need
A single sinusoidal rotor creates four evenly sized chambers. As each chamber rotates it gently conveys the fluid from the inlet port to the outlet port. At the same time, the opposite chamber opens to draw in more fluid, resulting in a smooth flow with virtually no pulsation.

A gate stops fluid flow from the higher pressure outlet to the low pressure inlet.

- High suction capability to handle viscous fluids
- Easy to clean pump design certified with:
  - EHEDG Type EL Class I
  - EHEDG Type EL Aseptic Class I
- Uses up to 50% less power than other pump types
- Low shear and zero pulsation
- Self-draining and easy to clean for minimal downtime

Sine pump® advantage

Gentle pumping with virtually no pulsation
- Ultra low shear pumping of whole foods, meats, dairy and concentrates with no loss to product integrity.

Superior viscous handling
- Powerful suction up to 0.85 bar. Products with viscosities from 1 cP to 8 million cP can be transferred with ease.

Simplicity
- Minimal downtime. One shaft, one seal and no timing gears enable easy in-place pump maintenance.

Interchangeable parts
- Fully interchangeable components between pumps of the same size, reducing spares inventory.

Sine pump design

A single sinusoidal rotor creates four evenly sized chambers. As each chamber rotates it gently conveys the fluid from the inlet port to the outlet port. At the same time, the opposite chamber opens to draw in more fluid, resulting in a smooth flow with virtually no pulsation.

A gate stops fluid flow from the higher pressure outlet to the low pressure inlet.
The cleanest pump you will ever need

Cleaner than any lobe or circumferential piston pump

- EHEDG Type EL Class I and EHEDG Type EL Aseptic Class I
  - The Type EL Aseptic Class I certification that Certa carries applies to closed equipment, wet cleaned-in-place (CIP) without dismantling, steam sterilisable and bacteria tight. All contact parts FDA and EC1935 compliant
- Reduce your CIP cycle and the amount of cleaning agents required
- Reduce chemical and water use and wastewater for disposal
- Modular seal system options:
  - Single mechanical seal
  - Single mechanical seal with flush
  - Double mechanical seal (required for Aseptic applications)

Lowest cost of ownership

- Extremely simple maintenance performed in-place by a line operative
- Patented design allows bi-directional running to pump duty fluid back to source
- Certa can be included in aseptic processes without the need of additional steam ports due to bacteria tight design proven by EHEDG Type EL Aseptic Class I certification

Low shear handling for particulates and soft solids

- Improves batch consistency and final product quality
- Virtually eliminates wastage of raw ingredients
- Low shear action prevents aeration and foaming during product transfer

Virtually pulsation free

- Smooth product flow with no need for ancillary dampeners, ensuring product quality
- Improves flow meter accuracy and heat exchanger efficiency

Energy efficient

- Requires up to 50% less power than lobe or circumferential piston pumps
- Greatly reduced electricity use means reduced carbon footprint
- Higher efficiency at high viscosity increases energy savings in your most difficult applications

A space between wet end (pumphead) and power end (bearing housing) of the pump, ensures fluid drains away in the event of a seal failure and eliminates the risk of contamination.

Sustainability curves

MasoSine Energy Efficiency (Mee) curves demonstrate how the sine principle requires less power to operate in viscous applications. The curves demonstrate clearly how MasoSine pumps help organisations achieve greater sustainability.
Handling fruit juice concentrates with high viscosity can make pumping slow and prone to cavitation. This is especially true if the temperature drops below 0°C, at which point viscosity will make a step increase. When viscosity increases, the maximum running speed of a lobe or circumferential piston pump needs to be reduced considerably to avoid cavitation, so reducing the achievable flow rate. Additionally, power consumption drastically increases as the rotors cut through the thicker fluid.

With Certa, changing to a higher viscosity product has negligible impact on the flow rate or power required. For example, increasing viscosity from 20,000 cP to 200,000 cP nominally increases the viscous horsepower (VHP) by around 0.1 to 0.3 VHP (0.22 kW).

Sine pumps also have a lower net positive suction head requirement (NPSHR) to minimise potential for cavitation with thick fluids.

In the cost conscious dairy sector, finding ways to reduce cleaning costs is a major challenge and one which the Certa pump easily solves. Its outstanding gentle pump principle allows customers to handle their delicate products with the care they deserve.

The Certa pump series has full EHEDG Type EL Aseptic Class I certification which allows usage within aseptic processes without the need for additional certification.

When inclusions such as soft fruit, diced vegetables, cooked pulses or meat are present, the Certa pump handles these soft solids without blockages and without causing damage to the ingredients. In testing, Certa pumps showed 50% less product degradation than a similar sized lobe pump.
Options and accessories

Connection ports
Certa pumps are available with all standard ports to match your application including DIN, TC, RJT and SMS. Customised options are available upon request.

Port orientations
Pumps can be configured with ports in a range of orientations to meet installation requirements, including a self-draining orientation.

Accessories
A static and dynamic flush system is available to flush the area behind the seal system, at low pressure, to prevent product from hardening and damaging the seal system. This is even possible with a single mechanical seal.

A jacketing system is available to allow pumps to be heated to the optimal temperature for your process, for example when pumping chocolate.

Priming devices for dry priming are also available.

Service and support

Service
We believe in providing the highest standard of service to our customers, at every level. We work with them to understand their applications and pressures affecting their business, and provide solutions that are specifically matched to their requirements.

Support
Customer support is provided through a network of sine pump specialists and technical support teams. This ensures our customers always benefit from local knowledge and MasoSine pump expertise. No matter where your business operates, MasoSine is never far away.

Genuine spares
MasoSine’s approved parts policy means only the highest quality materials are used in the manufacture of our pumps. This gives our customers confidence that our pumps will not let them down.

Essential spare parts can be despatched on the day the order is received. Standard pumps can be despatched within 24 hours.
